Introduction

Good afternoon, my name is Elle Berry and joining me today are my partners, Nic Tipton and Derek Noble. We are presenting our web application Seeking Developers.

Seeking developers is a mobile responsive collaboration tool for web developers. This application was constructed using the Spring Boot Framework on the back endl; Thymeleaf, javascript and bootstrap on the front end.

Sign-up

Here we have the Sign-up page. On this page a potential user must enter a username that has not already been used. They have the ability to write a short bio about themselves. Tell other developers whether they are front-end, back-end or a full-stack web developer and what coding languages they know.

Login

Today we will be signing in as a pre-existing user to better show you the features of our application.(info about security) using spring security.

Profile Page

After logging in your profile is already pre-populated with our default photo. It is pre-populated with the users biography, their coding languages, current project, favorite users, and a list of their completed projects. This page uses filestack API to allow users the ability to pick a photo from their local device.

Search

Our search bar allows users to search both users and projects.

Users/Projects Page

On this page you have the ability to look between Users and Projects. These links allow you view an individual user page or project page.

SINGLE USER PAGE

Now that we have selected our "single user" we can see their bio, their uploaded photo, the coding languages they know, their current project, completed project and favorite users. Using our add to favorite buttons we can connect our profile to theirs.

Dashboard

In the dashboard our user has the ability to see all of the non-completed projects from newest to oldest. The buttons on the page link to each individual project.

Single Project Page

On this page you can see the title of the project, the creating date, the username of the creator, the description of the project. You have the ability to request to join the project by clicking the button which will send an email to the creator of the project.(Try to use mail gun)

Edit project Page

- Adding Contributor
- The ability to complete project

Conclusion

About
